Information Sheet

What is RevisionID?

RevisionID is simply the best way to ensure a document that is being reviewed is the most recent.

The cloud-based **RevisionID** Subscription service helps you keep track of revisions / amendments to drawings, manuals, instructions, brochures, reports, MSDS, and documents of all kinds.

How does it work?

Authorised users log into the **RevisionID** Portal and maintain basic information about their documents.

No files are actually stored in **RevisionID**.

A unique QR2id Code is generated for each new revision, and this can easily be incorporated into the document for printing and distribution.

Scan to check current revision

A quick scan of the QR2id Code on the document will confirm whether or not the document being reviewed is the most recent.

If the recipient doesn't have a QR Scanning App on their smart phone or tablet, they can simply enter the Serial Number at the QR2id.com website.

Obsolete Documents?

Obsolete revisions are immediately identifiable by the icon and colour of the background displayed on scanning (Scan the code above for an example).

Subject to some settings within **RevisionID** for the document concerned, instructions on accessing the current revision can be sent via email.

How do I get an account?

RevisionID is an extremely cost-effective subscription service. No account is needed at any time to check the revision of a document.

Contact the **RevisionID** support team to arrange a free 30 day trial for your company/organisation.

Are there other uses for QR2id?

The QR2id Service can enhance efficiency and simplify record keeping for an extremely wide range of tasks. Scanning the QR2id Code can provide controlled and contextually relevant access to work-flows, checklists, and information.
